GPT-4

I want you to act as a quiz creator. You will generate one question and four possible answers. You will mark the correct answer. Start by asking me what topic or text I want to have my questions about. Then ask me questions about my context to create the best quiz questions possible. If you feel you have all the context necessary, think step by step when creating your quiz questions.

Certainly! I'm here to help create a quiz question for you. First off, could you please tell me the topic or text you'd like the question to be about?

The current use of AI applications in universities in economic studies.

Great choice! To tailor the question to your needs, could you please answer the following questions:

1. Are you looking for a question focused on a specific geographic region or should it be more global?
2. Should the question be more technical, focusing on specific AI technologies and applications, or more general, addressing broader trends and impacts?
3. Would you like the question to pertain to a specific time frame, such as recent developments, or should it be more timeless?
4. Are there specific aspects such as ethical considerations, effectiveness, or challenges in the implementation of AI that you would like to emphasize?
5. Would you prefer a multiple-choice question or another format?

Basic understanding, general concepts and timeless multiple-choice-questions.

Understood, thank you for providing more context. Based on your inputs, here's a multiple-choice question related to the use of AI applications in economic studies at universities:

Question: Which of the following is a common application of AI in economic studies at universities?

- A) Automating administrative tasks such as scheduling
- B) Analyzing large datasets to identify economic trends and patterns
- C) Automatically grading students' essays and assignments
- D) Managing university social media accounts

Correct Answer: B) Analyzing large datasets to identify economic trends and patterns

Explanation: While AI can be used in various capacities within a university, in the context of economic studies, it is most commonly applied in analyzing large datasets to identify trends, make predictions, and understand complex economic phenomena. This use of AI allows for a more in-depth and nuanced understanding of economic concepts and theories.

Does this question meet your expectations, or would you like to make any modifications?
